

DL1 SPORT - Develop your driving with this simple to set up and expandable GPS data logger

The DL1 SPORT, our entry level performance data logger.

The DL1 SPORT is our entry level unit, perfect for new users and those wanting an easy to use system. It is also the ideal tool for users wanting to improve their driving at races and track days. Very simple to set up and use with user friendly simplified configuration software, but still using high quality and proven hardware such as the 5Hz GPS system and digital accelerometer. The logger is expandable with a range of analogue sensors and ECU interfaces, and can also be connected directly to any of our range of dash boards and video systems. The data from the DL1 SPORT can be loaded directly into Race Technology's widely acclaimed data analysis software to check lap times, check where time was lost and gained, and how improvements could be made using our unique simulation tool.

A DL1 SPORT system is very simple to setup and get started. With essential information coming from just the internal GPS and accelerometers, and room for expansion with analogue sensors and ECU interfaces. Simple set up, professional data.

Why choose a DL1 SPORT data logger?

What our GPS data loggers do is more than just collect the data, they allow all the data to be referenced to not just time, but a position on the track. This allows you to interpret the data in a meaningful and understandable way, referenced clearly to the real world: Pick a corner and see how you braked, how much grip you used and where, then how you exited. Compare what you did on your fastest time through the sector and learn where you can go faster.

Simple to set up with the new user friendly configuration software

- Review your braking points and grip usage with the built in 2g 3-axis. accelerometer (optional 6g enhancement available for high downforce applications).
- Capable of detecting minute changes with 100Hz update rate on all sensor and accelerometer channels - 8 analogue sensor inputs ready for additional sensors.
- Lap and sector timing, in the software, or live with a DASH2, DASH3, or DASH4 PRO display.
- Get the most out of your engine by logging information from your ECU
- Optional GoPro control + video licence for synchronised HD video and data.

DL1 SPORT - What's in the box?

A complete DL1 data logging system, ready to use includes: -

- DL1 SPORT unit
- Magnetic mounting GPS antenna (3m cable)
- 1 pair of stainless steel mounting brackets
- 4 velcro strips
- 2m serial lead (null modem)
- 12v power lead (with connector block)
- Comprehensive software CD
- Carrying case (with cut foam interior)
- DL1 Quick Start Guide

The only thing you will need to add is a compact flash card and a suitable card reader for your PC, to download and analyse data.

Recommended Compatible Products:

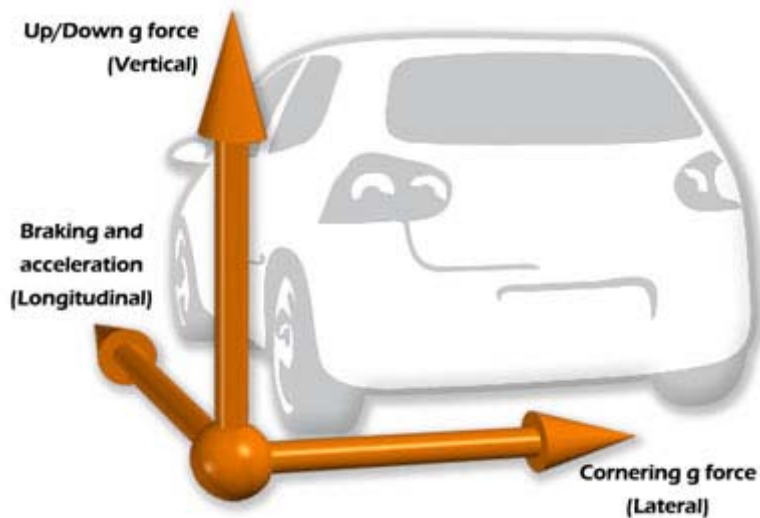

DL1 SPORT enhancement options:

6g Accelerometers

6g accelerometers are recommended for applications that use large aerodynamic aids. Where the aerodynamic down-force increases the vehicle traction at high speeds.

GoPro HD Video Synchronisation

Synchronised DL1 data with HD video using the GoPro control option. Included software licence enables HD video by data analysis, and data overlaid video exports from the Analysis software. Control the GoPro using the control cable (compatible with hero, hero 2 and hero 3 white).

*GoPro camera not included.
