The **CD1140** family of torque sensors offers a contactless transmission for bridge supply voltage and measurement transmission. It eases continuous rotating operations with low wear even at high speed.

The **CD1140** is also available with optional speed or angle detection (but not both).

With a long standing experience as a designer and manufacturer of sensors, TE CONNECTIVITY often works with customers to design or customize sensors for specific uses and testing environments.

On request, Instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
