PRODUCT DESCRIPTION

The X3 PX100:10.160.05 is a high resolution wiper blade sensor which replaces the PX100:1.160.05. The sensing area has been made wider (2.54cm) and provides more sensing points. The new design is more sensitive to lower pressures and provides better line load estimates. The sensor has been specifically made to test the profiles of wiper blades and the wiper blade arms.

The sensor design is based on industry needs for assessing and comparing different wiper blade profiles and different wiper blade designs. The sensor can be mounted onto a test bench or taped onto a windshield. Wiper blades are then moved onto the sensor area and a repeatable and consistent pressure profile can be viewed and compared using the X3 PRO Software.

PRODUCT DESCRIPTION

The LX205:40.40.10 is a mid-rangepressure sensor with over 16,000 sensing points. The sensor can be used for measuring hand pressures on surfaces, automated clamping pressures, seal pressures, and for higher pressure research or design testing. The LX205:40.40.10 is a thin and conformable sensor that can fit into tight spaces and can be used on uneven surfaces. Additionally, the sensor provides a very fast data acquisition rate for capturing rapid movements.

ANALYSIS AND STATISTICS

X3 PRO features help support the dynamic analysis of pressure readings within a user-defined group or over the entire sensor pad.

Peak Pressure	Monitor the highest pressure on one or more cells of a given pressure imaging data frame.
Average Pressure	Calculate an average pressure over the entire sensor surface.
Contact Area	Calculate area of the sensor loaded by a subject.
Sensor Cell-Group Analysis	Define groups of sensing cells for separate analysis from the rest of the pressure image. The same statistical analysis tools for the entire system can be applied to sensor cell groups. Define group templates to facilitate sensor cell-group analysis and measure the statistical variance of the sensor output in your defined sensor groups.
File Compare	Examine up to four pressure imaging sessions simultaneously to compare and analyze data.

SOFTWARE **X3 PRO V7.0**

PRODUCT DESCRIPTION

X3 PRO V7.0 provides advanced automated features for design and test engineers. Building on the stable and secure recording and data integrity platform of PRO V6.0, this latest release focuses on providing more effective process and reporting tools for automotive tire design and performance engineers.

PRO V7.0 – NEW FEATURE HIGHLIGHTS

AutoSeat Mode
Tools for layout and reporting

A comprehensive tool for automotive and aerospace seating customers that provides photo import, pressure image overlay, h-point sizing and adjustment, and surface area reporting. Seating design and test engineers can now overlay pressure images on photos or graphics and adjust the pressure image size and positioning to specic h-point references. Groupings can be created, displaying information in the images and on a body form. Data can be presented in pressure gradients, average pressure, contact area and more.

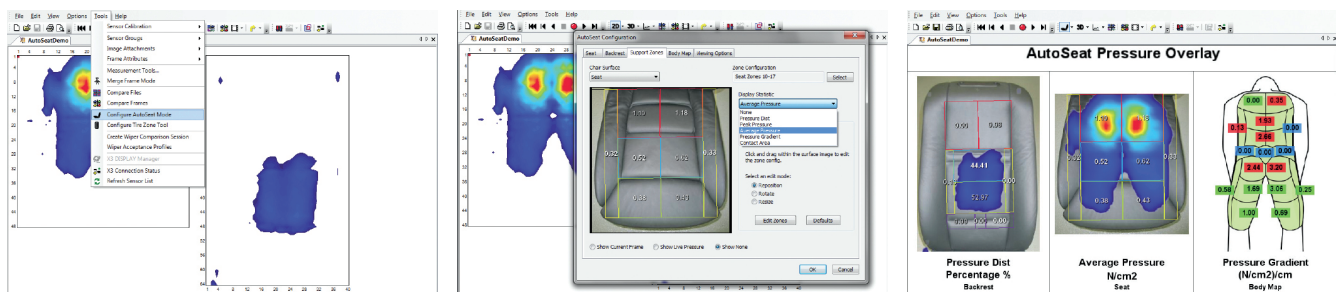

Tire Zone Mode
Tools for automated measurements, ratios, averages and reporting

A systematic process for recording tire pressure images that provides the user with the option to select specific images and calculate the lengths, ratios, contact areas, gross contact areas, and groove area fractions. The process allows for the adjustment of applied measurement lines and the automatic recalculation of measurements.

XSENSOR ®Technology Corporation

Innovators in Pressure Imaging

SOFTWARE **X3 PRO V7.0**
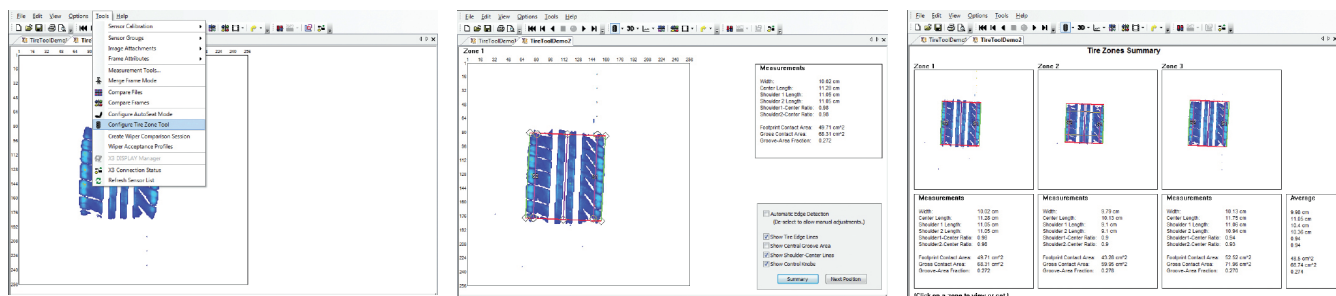

Sensel Transform

Functionality allowing the user to move the pressure image within the window to easily align with previous frames or images. Misalignment or movement of sensors can be adjusted and aligned afterwards to provide more consistency in image alignment for averaging and analysis.

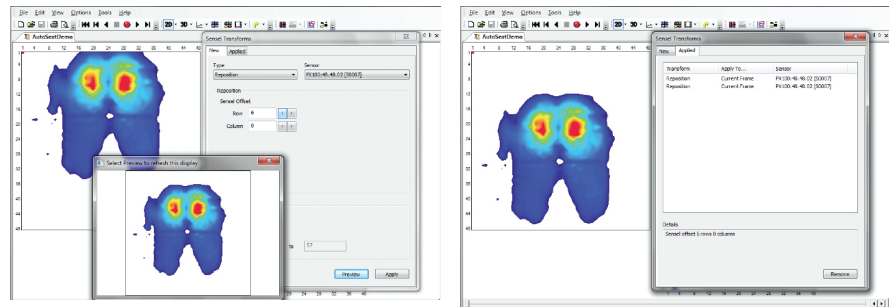

Wiper Blade Acceptance Parameters

X3 PRO V7.0 provides the ability to use specic X3 high speed sensors and record at rates up to 500 frames per second. For the first time, pressure imaging can effectively be used in high speed data acquisition environments such as automotive rear impact testing for car seat safety and performance. High speed data acquisition combined with optimized X3 sensors provides insights into research applications that were never possible until now.
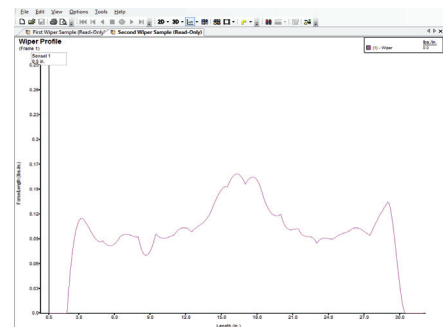

Applied Load Calculations

Users can apply external load measurements to a frame, a series of frames, or a file and the data will be adjusted accordingly. The original data is always kept intact, allowing the user to revert to original data or apply different load calculations to the pressure readings.
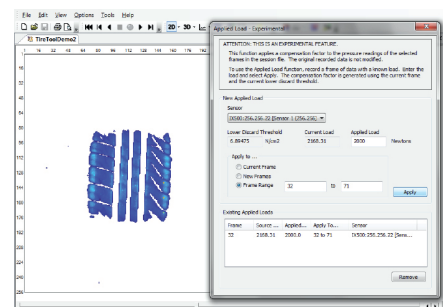

Other Features

- Zero pressure filters
- Centre of pressure trails
- Advanced merge frame functionality
